FOLLI Clinic

A FREE HAIR HEALTH CHECK-UP

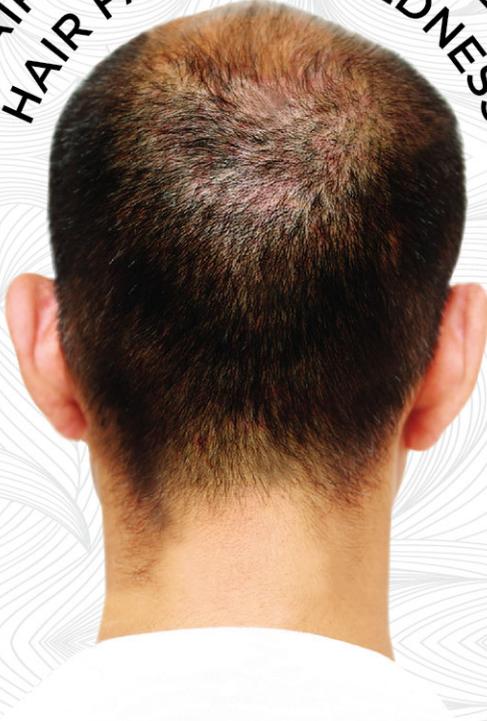

AN INITIATIVE BY

FOLLIRICH™

Autologous GFC Therapy Kit

HAIR THINNING
HAIR FALL | ALOPECIA
BALDNESS

A back view of a man's head showing significant hair thinning and baldness, particularly on the crown and top of the head. The hair is dark brown and appears sparse in several areas. The background is a white, wavy, abstract pattern.

A lot many times, patients fail to realise the symptoms of hair problems like Alopecia in their early stages and repent later as they have to wait for that long, to regain their beautiful tress.

Wockhardt Regenerative Division has come up with **Folliclinic** - A unique service oriented partnership wherein your patients can realise their true hair health through a check-up hosted at your clinic premises, so they can get timely intervention at your experienced hands.

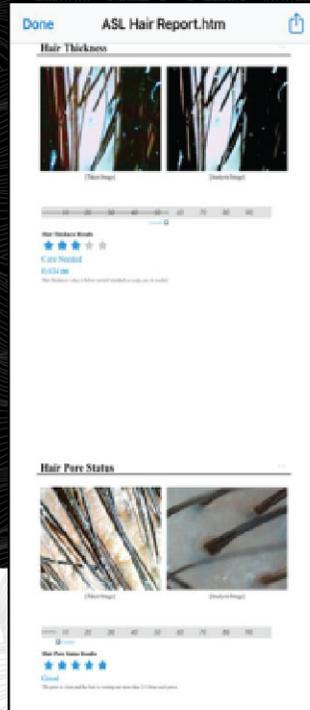

OFFER YOUR PATIENTS HAIR CHECK-UP WITH STATE-OF-ART HAIR ANALYSER!

Before Hair analyzer became a reality, there was no practical way to measure hair loss, breakage and response to treatments. But today, thanks to modern day R&D, doctors/healthcare workers can precisely and accurately test any hair-related problem in as little as 5 minutes.

Wockhadt Regenerative Division is proud to announce that it will be offering your patients, as part of Folliclinic initiative, a chance to experience this ASL to test their hair health!

This device comes with two magnified lenses, namely, 202 and 203. Lens 202 is used for Hair loss status, Scalp status, Hair density, Hair thickness, checking the hair pore, exposure of scalp vessel and keratin of scalp. Lens 203, on the other hand, is used for cuticle testing

• Measures below hair parameters

Hair Loss status

Scalp status

Hair Density

Hair Thickness

Hair Pore

Exposure of Scalp Vessel

Keratin of Scalp

- Electronic report will be generated post hair analysis
- Can be easily shared with doctor as well as patient

WHAT IT MEANS TO SAY YES TO FOLLICLINIC

Once you accept the partnership, Wockhardt Regenerative Division will leave no stones unturned in making your clinic stand apart from the rest! Here is a brief break-down of the Folliclinic event:

1

It will start with pre-camp promotion at your clinic prior to 1 week of scheduled camp date with **Standee**

Leaflets on reception area

2

Standee will be kept in premises of your clinic and Camp Leaflet will be kept conveniently at your reception area

3

The team will create stylish **Social Media post** on camp awareness that you can post on your page

4

Special **Tent Card** will be kept at your table on the Day of Camp

5

Hair analysis will be done for patient using **ASL hair analyser machine**

6

Post hair analysis, Team will create **Report Card for the hair analyser reading** and hand it over to patient. Also electronic report of hair analysis will be sent over your whatsapp

7

Patient will be handed over **PIL** and they can **use selfie frame** to click picture

8

With patient consent
We will create selected **Patient Video Bytes**

9

Post camp your Video bytes will be taken for your clinic promotion
